Supercritical Fluid Technology for Energy and Environmental Applications

Supercritical Fluid Technology for Energy and Environmental Applications

Supercritical Fluid Technology for Energy and Environmental Applications covers the fundamental principles involved in the preparation and characterization of supercritical fluids (SCFs) used in the energy production and other environmental applications. Energy production from diversified resources - including renewable materials - using clean processes can be accomplished using technologies like SCFs. This book is focused on critical issues scientists and engineers face in applying SCFs to energy production and environmental protection, the innovative solutions they have found, and the challenges they need to overcome. The book also covers the basics of sub- and supercritical fluids, like the thermodynamics of phase and chemical equilibria, mathematical modeling, and process calculations.

A supercritical fluid is any substance at a temperature and pressure above its critical point where distinct liquid and gas phases do not exist. At this state the compound demonstrates unique properties, which can be "fine-tuned," making them suitable as organic solvents in a range of industrial and laboratory processes.

This volume enables readers to select the most appropriate medium for a specific situation. It helps instructors prepare course material for graduate and postgraduate courses in the area of chemistry, chemical engineering, and environmental engineering. And it helps professional engineers learn supercritical fluid-based technologies and use them in solving the increasingly challenging environmental issues.

- Relates theory, chemical characteristics, and properties of the particular supercritical fluid to its various applications
- Covers the fundamentals of supercritical fluids, like thermodynamics of phase and chemical equilibria, mathematical modeling, and process calculations
- Includes the most recent applications of supercritical fluids, including energy generation, materials synthesis, and environmental protection

From reader reviews:

Charles McCreery:

Does one one of the book lovers? If yes, do you ever feeling doubt when you are in the book store? Try and pick one book that you never know the inside because don't determine book by its handle may doesn't work is difficult job because you are afraid that the inside maybe not seeing that fantastic as in the outside seem likes. Maybe you answer is usually Supercritical Fluid Technology for Energy and Environmental Applications why because the wonderful cover that make you consider in regards to the content will not disappoint you actually. The inside or content will be fantastic as the outside or even cover. Your reading 6th sense will directly guide you to pick up this book.

Dorothy Delarosa:

The book untitled Supercritical Fluid Technology for Energy and Environmental Applications contain a lot of information on this. The writer explains your ex idea with easy means. The language is very straightforward all the people, so do definitely not worry, you can easy to read the idea. The book was published by famous author. The author provides you in the new time of literary works. You can easily read this book because you can read on your smart phone, or gadget, so you can read the book within anywhere and anytime. In a situation you wish to purchase the e-book, you can available their official web-site in addition to order it. Have a nice study.

Lise Callicoat:

Book is one of source of know-how. We can add our understanding from it. Not only for students and also native or citizen want book to know the revise information of year to year. As we know those ebooks have many advantages. Beside most of us add our knowledge, could also bring us to around the world. From the book Supercritical Fluid Technology for Energy and Environmental Applications we can take more advantage. Don't one to be creative people? To become creative person must like to read a book. Just simply choose the best book that ideal with your aim. Don't possibly be doubt to change your life with this book Supercritical Fluid Technology for Energy and Environmental Applications. You can more desirable than now.

Theresa Nash:

Reading a publication make you to get more knowledge from that. You can take knowledge and information from your book. Book is composed or printed or descriptive from each source in which filled update of news. In this particular modern era like right now, many ways to get information are available for a person. From media social like newspaper, magazines, science guide, encyclopedia, reference book, book and comic. You can add your knowledge by that book. Do you want to spend your spare time to spread out your book? Or just looking for the Supercritical Fluid Technology for Energy and Environmental Applications when you desired it?
