Charlie promised to be a "Big Shot," as the press dubbed the nation's twenty-fifth nuclear weapons test. With a projected explosive yield equivalent to thirty-three kilotons of Tnt, Charlie would be the largest test conducted to date at the Nevada Proving Ground, formerly-and again to be-the Nevada Test Site. Charlie also was big in the sense that for the first time a nuclear weapons test would be held as an "open" shot that allowed a significant degree of public access. For the first time, as well, ground and airborne troops would conduct military maneuvers on a simulated nuclear battlefield following the shot. By 9:00 a.m. on April 22, 1952, at H-hour minus thirty minutes,* all was ready and in place for Charlie. Hundreds of observers, dignitaries, and reporters, previously banned from the site, had gathered on a small hill newly christened "News Nob," about nine miles south of ground zero, to await the blast.
