MFF parachute operations are used when enemy air defense systems, terrain restrictions, or politically sensitive environments prevent low altitude penetration or when mission needs require a clandestine insertion. MFF parachute infiltrations are conducted using the Ram-Air Parachute System (RAPS), which is a high-performance gliding system. The RAPS is a highly maneuverable parachute that has forward air speeds of 20 to 30 miles per hour (mph). The glide capability of the RAPS provides commanders the means to conduct standoff infiltrations of designated areas without having to physically fly over the target area. This process allows commanders to keep high-value air assets outside the detection and threat ranges of enemy air defense systems or politically sensitive areas.

MFF parachuting allows SOF personnel to deploy their parachutes at a predetermined altitude, assemble in the air, navigate under canopy, and land safely together as a tactical unit ready to execute their mission.
