Semantics: Primes and Universals (St. in Classification Data Analysis)

Anna Wierzbicka

Semantics: Primes and Universals (St. in Classification Data Analysis) Anna Wierzbicka Conceptual primitives and semantic universals are the cornerstones of a semantic theory which Anna Wierzbicka has been developing for many years. *Semantics: Primes and Universals* is a major synthesis of her work, presenting a full and systematic exposition of that theory in a non-technical and readable way. It delineates a full set of universal concepts, as they have emerged from large-scale investigations across a wide range of languages undertaken by the author and her colleagues. On the basis of empirical cross-linguistic studies it vindicates the old notion of the "psychic unity of mankind", while at the same time offering a framework for the rigorous description of different languages and cultures.
