### **Concurrent Programming on Windows**

Joe Duffy

#### Concurrent Programming on Windows Joe Duffy

"When you begin using multi-threading throughout an application, the importance of clean architecture and design is critical. . . . This places an emphasis on understanding not only the platform's capabilities but also emerging best practices. Joe does a great job interspersing best practices alongside theory throughout his book."

- From the Foreword by Craig Mundie, Chief Research and Strategy Officer, Microsoft Corporation

Author Joe Duffy has risen to the challenge of explaining how to write software that takes full advantage of concurrency and hardware parallelism. In *Concurrent Programming on Windows*, he explains how to design, implement, and maintain large-scale concurrent programs, primarily using C# and C++ for Windows.

Duffy aims to give application, system, and library developers the tools and techniques needed to write efficient, safe code for multicore processors. This is important not only for the kinds of problems where concurrency is inherent and easily exploitable—such as server applications, compute-intensive image manipulation, financial analysis, simulations, and AI algorithms—but also for problems that can be speeded up using parallelism but require more effort—such as math libraries, sort routines, report generation, XML manipulation, and stream processing algorithms.

*Concurrent Programming on Windows* has four major sections: The first introduces concurrency at a high level, followed by a section that focuses on the fundamental platform features, inner workings, and API details. Next, there is a section that describes common patterns, best practices, algorithms, and data structures that emerge while writing concurrent software. The final section covers many of the common system-wide architectural and process concerns of concurrent programming.

This is the *only* book you'll need in order to learn the best practices and common patterns for programming with concurrency on Windows and .NET.

#### From reader reviews:

#### Sophia Myers:

What do you concentrate on book? It is just for students as they are still students or this for all people in the world, the particular best subject for that? Only you can be answered for that concern above. Every person has several personality and hobby for every single other. Don't to be pressured someone or something that they don't wish do that. You must know how great as well as important the book Concurrent Programming on Windows. All type of book is it possible to see on many solutions. You can look for the internet resources or other social media.

#### Harry Oliver:

Reading can called head hangout, why? Because when you are reading a book specifically book entitled Concurrent Programming on Windows your mind will drift away trough every dimension, wandering in each and every aspect that maybe unfamiliar for but surely can be your mind friends. Imaging each and every word written in a publication then become one type conclusion and explanation this maybe you never get before. The Concurrent Programming on Windows giving you yet another experience more than blown away your thoughts but also giving you useful details for your better life in this era. So now let us explain to you the relaxing pattern here is your body and mind will be pleased when you are finished looking at it, like winning a game. Do you want to try this extraordinary investing spare time activity?

#### **Ruby Harris:**

Does one one of the book lovers? If so, do you ever feeling doubt when you find yourself in the book store? Attempt to pick one book that you never know the inside because don't determine book by its protect may doesn't work the following is difficult job because you are frightened that the inside maybe not while fantastic as in the outside appearance likes. Maybe you answer is usually Concurrent Programming on Windows why because the amazing cover that make you consider in regards to the content will not disappoint anyone. The inside or content will be fantastic as the outside as well as cover. Your reading sixth sense will directly show you to pick up this book.

#### Lamar Carr:

Reading a book to become new life style in this 12 months; every people loves to read a book. When you learn a book you can get a lots of benefit. When you read textbooks, you can improve your knowledge, because book has a lot of information onto it. The information that you will get depend on what forms of book that you have read. If you would like get information about your research, you can read education books, but if you want to entertain yourself you are able to a fiction books, such us novel, comics, and also soon. The Concurrent Programming on Windows offer you a new experience in studying a book.
