System Identification: A Frequency Domain Approach Rik Pintelon, Johan Schoukens

System identification is a general term used to describe mathematical tools and algorithms that build dynamical models from measured data. Used for prediction, control, physical interpretation, and the designing of any electrical systems, they are vital in the fields of electrical, mechanical, civil, and chemical engineering.

Focusing mainly on frequency domain techniques, *System Identification: A Frequency Domain Approach, Second Edition* also studies in detail the similarities and differences with the classical time domain approach. It highlights many of the important steps in the identification process, points out the possible pitfalls to the reader, and illustrates the powerful tools that are available.

Readers of this Second Edition will benefit from:

- MATLAB software support for identifying multivariable systems that is freely available at the website <http://booksupport.wiley.com>
- State-of-the-art system identification methods for both time and frequency domain data
- New chapters on non-parametric and parametric transfer function modeling using (non-)period excitations
- Numerous examples and figures that facilitate the learning process
- A simple writing style that allows the reader to learn more about the theoretical aspects of the proofs and algorithms

Unlike other books in this field, *System Identification, Second Edition* is ideal for practicing engineers, scientists, researchers, and both master's and PhD students in electrical, mechanical, civil, and chemical engineering.

From reader reviews:

Robert Gibson:

Information is provisions for anyone to get better life, information currently can get by anyone from everywhere. The information can be a knowledge or any news even a problem. What people must be consider whenever those information which is inside former life are hard to be find than now could be taking seriously which one is acceptable to believe or which one the actual resource are convinced. If you find the unstable resource then you understand it as your main information you will see huge disadvantage for you. All of those possibilities will not happen inside you if you take System Identification: A Frequency Domain Approach as the daily resource information.

Maria Huffman:

The book System Identification: A Frequency Domain Approach has a lot details on it. So when you read this book you can get a lot of profit. The book was written by the very famous author. Tom makes some research previous to write this book. This particular book very easy to read you can get the point easily after scanning this book.

Betty McClanahan:

Is it a person who having spare time subsequently spend it whole day by simply watching television programs or just laying on the bed? Do you need something new? This System Identification: A Frequency Domain Approach can be the response, oh how comes? A fresh book you know. You are so out of date, spending your spare time by reading in this fresh era is common not a nerd activity. So what these textbooks have than the others?

Lena Robertson:

What is your hobby? Have you heard this question when you got students? We believe that that issue was given by teacher to their students. Many kinds of hobby, Everyone has different hobby. And you also know that little person including reading or as reading through become their hobby. You need to understand that reading is very important along with book as to be the thing. Book is important thing to include you knowledge, except your personal teacher or lecturer. You see good news or update regarding something by book. A substantial number of sorts of books that can you go onto be your object. One of them is this System Identification: A Frequency Domain Approach.
